MRI: Day of Scan

The study you will be participating in involves magnetic resonance imaging (MRI). MRI makes use of strong magnetic fields and safety precautions need to be observed. It is important not to wear any metal or metallic objects during the study. Metallic objects brought into the MRI environment can be attracted to the magnet. Therefore, we ask that you not wear any of the following items during your participation. You may wear these items up until we begin the study, but you will then have to remove them.

- Earrings or other piercing jewelry
- Neck chains or similar jewelry
- Watches, bracelets or similar wrist jewelry
- Bobby pins or hair clips
- Hair extensions or hair weaves
- Glasses (you should wear contact lenses if possible)
- Removable orthodontic appliances
- Shoes with steel toes or shanks
- Clothing with metal filament
- Eye shadow or mascara (these products frequently have a metallic base)

Items such as belts, wallets, watches, and keys and any of the above items will need to be removed.

Please wear comfortable clothing. Cotton, polyester, and wool are best. Don't worry about the snaps or zippers on pants, as that metal can be allowed into the scanning facility.

If you have questions about these procedures, please feel free to contact the study coordinator.
